## ADVANCED WINDOW MAINTENANCE

### CRYSTAL CLEAR 550

#### GLASS CLEARING AGENT AND WATER SPOT REMOVER RESTORE WINDOWS SAFELY AND EASILY

Pictured here are different types of the effects of glass corrosion. Water spots, building run off and pollution can cause haze, streaks, rainbow effects and cloudiness. Water spots and building run off if left unchecked will cause erosion damage on any glass over time. About 95% of the corrosion on glass is currently in the Stage I condition and can be easily removed with CRYSTAL CLEAR 550 leaving a smooth optically clear window. Your clients and your pocket book will both appreciate your knowledge in how to to remove water spots, clouds and haze quickly and easily with CRYSTAL CLEAR 550.

Stage I Corrosion on Hotel Window

## WHAT ARE YOUR OPTIONS?

Glass with Stage I Stains can usually be restored

**Option one:** Do nothing and eventually have to replace the glass.

**Option two:** Manually polish the glass. **Pros:** Most of the surface damage can be polished

away. **Cons:** Very labor intensive, may be even be more expensive than replacing the glass.

**Option three:** Clear the glass with CRYSTAL CLEAR. **Pros:** Eliminates most all water spots, haze and clouding that damage optical clarity and requires no new equipment or special training. This type of restoration is fast, easy and very profitable. **Cons:** Local glass glaziers will be unhappy when they lose the sale of the glass replacement.

Eroded Glass Causes Light to Prism and Gives Rainbow Effect

## RESTORATION IS AN EFFECTIVE SOLUTION FOR 95% OF ALL GLASS STAINING PROBLEMS

These panes show the glass canopy at the Seattle Center after a washing of both sides but a CRYSTAL CLEAR application on the panes on the right - years of haze gone in an instant. You can now restore virtually all glass that is not physically damaged or in a Stage II corrosion condition quickly and efficiently. Say good-bye to water spots, haze, streaking and cloudiness.
